

PCP PATIENT SUMMARY “CHEAT SHEET” FOR OSCAR TEMPLATE

Thank you for continuing to help us improve the flow of patient information into the hospital. We know it takes time, but sending in your GP Patient Summary (now called the PCP Patient Summary in Power Chart) really improves your patients' care. To help you create the summaries as quickly as possible, we have created templates for each major EMR in our community. These templates have been developed collaboratively with GPs and hospitalists who have given input on the information they need most. Although each EMR template will look different because the EMRs are different, we're designing them so they have the same structure, as much as possible, across EMRs - so the same information is at least presented in the same order when the MRP goes to read it.

We've really been leading the way in this area and in fact the first template that we built for IntraHealth, is the basis of ongoing provincial work on data standards. We appreciate any and all feedback so that we can continue to create and advocate for what we need to make information transfer work both for providers and our patients.

The following documents will guide you through setting up and using the OSCAR PCP Patient Summary template for transferring information to the hospital when your patient is admitted or likely to be admitted sometime soon.

Document 1: The Patient Admission Summary template will pull information automatically from your patient's chart. In Document 1 meet our test patient Betty Boop and see how her Summary auto-populates. Also find the tips on how to complete the rest of the template, or how to get the best out of it. It is a work still in progress, so unfortunately there are still a few glitches.

Document 2: Here is the completed Betty Boop template so you can get an idea of the finished product.

Document 3: At present, it is not possible to directly attach documents to the e-form template. We are working on a smooth way to do this, but at the moment it takes a few steps. You can either print off all the documents and fax them as a bundle, or you can create a paperless bundle by following the steps in Document 3.

Please remember that Power Chart already contains hospital-based labs, imaging and consults, so you do not need to attach these. What it does **NOT** contain are **community specialist consults** which are often very helpful to the MRP.

Installing GP Patient Summary template:

Now in OSCAR eForm library entitled Primary Care Provider Patient Summary:

Follow these steps if you are installing the eForm at your clinic for the first time.

Installing the Patient Medical Summary eForm

Step 1

Download the *.zip file that contains the Patient Medical Summary to your desktop.

You can find this at oscarcanada.org.

a) Click on lime green eforms button.

b) click on eforms again to browse the data base.

c) On the upper R corner, find the 'search site' window and write Primary Care Provider Patient Summary. It will find both PDF and zip file copies. Click on the 2019 zip file and download to your desktop.

Step 2

Within Oscar you will navigate to:

a) Administration

b) Manage eForms

The eForms Library for your OSCAR (specific to your clinic) will open and show all the existing eForms uploaded to your instance.

c) Select Import

You should be on this screen

eForm Library [View Deleted](#)

[Upload](#) [Import](#) [Download](#)

Import eForm:
Choose File no file selected ⚠ Import

Info: When importing the file format is required to be a zip file.

A. Click on "Choose File" - it will take you to your desktop so you can click on the 2019 Primary Care Provider Patient Summary zip file.

The file will appear as seen in the below image.

Thank you for looking after this patient. Here are some details you may find helpful:

I see Betty has been admitted with another fracture of the hip. Betty is a charming lady who, despite her great age, has a wonderful quality of life and wishes to keep on going. She requests full medical treatment at all times, and you should know that she will sue you if she does not receive it. The best of luck to you all - I am going on a long vacation starting today.

Document 3 - Instructions for Attaching

Unfortunately, it is not possible to attach documents to an e-form, so if you want to attach documents electronically so they can all be e-faxed or uploaded into the web portal as one bundle, you have to turn your PCP Patient Summary into a document.

1. You need to download the completed Patient Summary e-form into a PDF document and save it to your desktop. To do this, click on print and choose the 'print to PDF' option. Then upload the PDF version into the Documents section of your EMR.
2. Click on 'Documents' within the template (as per the below screen shot), and it will take you to your Documents inbox.

PRIMARY CARE PROVIDER PATIENT SUMMARY

Date: 2019-05-27
